

## 3 Magliner Tools to Keep Your Ice Delivery Company Running Smoothly

## 3 Magliner Tools to Keep Your Ice Delivery Company Running Smoothly

---

While most modern homes and restaurants have freezers or ice machines, ice delivery companies still provide an important service. The average residential ice machine or ice cube tray may suffice for keeping drinks cool at home or blending up a smoothie, but it would be a bit time-consuming to try to fill a 10-pound bag of ice with cubes from the kitchen fridge. For camping or fishing trips, tailgates, or barbeques, people source bags of ice from ice manufacturers and delivery companies.

When your company provides an important product, your team needs the right equipment to manufacture and distribute it. Fortunately, companies across all industries trust Magliner equipment for their safety, reliability, and cutting-edge designs. Here are three Magliner tools to keep your ice manufacturing and distribution company running smoothly.

### Motorized Hand Trucks

For stocking retail freezers with 5 to 10-pound bags of ice or transporting large equipment, help your team get the job done efficiently with a Magliner [motorized hand truck](#) capable of handling up to 1,000 pounds. The days of using a horse and wagon to transport hand-cut ice blocks through the snow may be gone, but a lot of horsepower still goes into the equipment that keeps this industry afloat.

The patented quick attach feature of a Magliner [powered hand truck](#) allows your team to quickly change out attachments without tools, pins, or bolts, meaning your equipment can adapt as efficiently as your industry.

### **Curb Ramps**

Some innovations seem so simple that you don't realize just how important they are until you lack them, like ice cubes or curb ramps. Curb ramps can reduce the risk of injury to your employees and the strain that is required to navigate curbs with heavily loaded carts.

Supply your team with a Magliner 27-inch by 27-inch curb ramp. These curb ramps boast an impressive weight capacity of 600 pounds, allowing your company to save time and improve productivity by quickly traversing curbs and thresholds that may otherwise slow your employees down.

### **Customized Hand Trucks**

Let's face it—no matter how far the industry advances, ice is still ice. Refrigerated trucks and coolers are only useful if you can get your product into them before it melts! Having the tools to transport your product quickly and efficiently is essential for any industry—especially ice manufacturers and distributors.

Whether your ice delivery company needs a convertible hand truck that transforms from a two-wheeled dolly to a platform truck or a [hand cart](#) with pneumatic wheels, choose the company that has been a trusted manufacturer for over 75 years: Magline.

The ice industry is an incredible example of progress and innovation. While ice was once a coveted resource that had to be harvested from nature and carefully protected, it is now a manufactured commodity available at just about any corner store. When selecting the proper tools for your ice manufacturing and delivery company, choose Magliner equipment for tools that are as innovative as your industry.
