

4 Magliner Tools Every Warehouse Should Have

4 Magliner Tools Every Warehouse Should Have

Do you value efficiency in your warehouse? Do you want your workers to get as much done in as little time as possible? Magliner material handling tools can help your workers move items faster, more easily, and with less energy. From the [motorized hand truck](#) for moving large items to the convertible hand truck for versatility, these are some Magliner tools every warehouse should have.

Hand Cart

The classic Magliner [hand cart](#) is a workhorse in many warehouses. If your warehouse workers are still carrying boxes of items by hand, equip them with a hand truck and get ready to see a major difference. It's far easier to stack boxes and wheel them into position than carrying just a box or two by hand. You can customize Magliner hand trucks with different wheels, nose plates, and handles to make them perfect for your warehouse workers. Whether it's moving inventory around the warehouse or bringing it out to a store floor for restocking shelves, the Magliner hand cart is an essential item for warehouses.

Powered Hand Truck

The Magliner [powered hand truck](#) excels at moving larger, heavier items weighing up to 1,000 pounds across long distances. When you need to move fridges or couches from the warehouse and onto a delivery truck, the powered hand truck is the perfect tool for the job. Instead of relying on team lifts, a single worker can move heavier objects with the help of a powered hand truck. Different attachments can also help the tool do even more, such as moving small trailers. It can even be used for deliveries if the truck has a powered lift gate.

Convertible Hand Truck

When your warehouse workers need more versatility for moving oddly shaped items, equip them with a Magliner convertible hand truck. It starts as the classic upright hand truck but can quickly convert to a horizontal hand cart in four-wheel mode. This makes it easy to move heavier loads up to 1,000 pounds or oddly shaped items that wouldn't fit on a traditional hand truck.

Hand Lift Truck

Some warehouses are small or have narrow aisles, making it much harder or impossible for a forklift truck to navigate. The Magliner hand lift truck offers a smaller footprint than a typical forklift truck. It doesn't have powered movement, meaning your workers don't need a license to operate it. It's highly useful for moving items around the warehouse, and, like the hand truck, can make restocking shelves easier. Because it can lift items up to shelf level, your workers won't have to bend down to pick up boxes, helping save energy and reducing the risk of back injuries.
