## 4 Reasons Your Plumbing Company Needs Magliner Material Handling Tools

---

Your plumbing company might offer a variety of services, from replacing fixtures to fixing toilets or installing water heaters. With such a breadth of services, your employees need to move a lot of equipment, tools, and supplies. Magliner material handling tools, like the classic [hand dolly](#) or heavy duty hand truck, can help make moving items easier, faster, and less tiring. Here are four reasons plumbers need Magliner material handling tools.

### Move Tools and Supplies Easier

Instead of carrying in tools one by one, bring your whole toolbox with a Magliner hand truck. It's also easy to move supplies, whether it's a faucet still in a box, a sink, a toilet, or a box full of fittings. Moving them by hand can be tiring or require multiple trips back to the truck. With a Magliner hand dolly, the job is much easier on your employees, helping them be more efficient so they can get the job done and move on to the next call. If you need more versatility, consider a convertible hand truck, which can quickly convert to a horizontal hand cart and back to the upright classic dolly.

### Water Heaters and Water Softeners Are Less of a Hassle

Water heaters and water softeners are often large and heavy, and it usually requires a team lift to move them. Why tie up two employees and tire them out when a Magliner [appliance hand truck](#) can help a single employee do the job effortlessly? With optional side wings, a retractable ratchet strap, and a fourth wheel assembly for breaking back the dolly, it's easy to keep the larger items on an appliance hand truck. With a higher weight capacity of 800 pounds, it excels

at helping your employees move larger items over short distances, such as from a truck and into a client's garage or bathroom.

### **Stairs Aren't a Challenge with Magliner Tools**

When you need to move toilets and other equipment up to a second floor, you may want to invest in a Magliner powered stair climbing dolly. It does most of the work for your employees, letting them stay in an ergonomic position while the dolly moves up or down a set of stairs. If you and your employees need to move a large water heater into a basement, it may be worth upgrading to a heavy duty powered stair climber, which has a weight capacity of 725 pounds.

### **Move Items Around the Warehouse Quickly and Easily**

If you're like most companies, your warehouse is full of water heaters, fixtures, pipes, and other supplies. Moving heavy loads around the warehouse can be taxing and slow. A Magliner [electric dolly](#) can make that task a breeze. While the Magliner heavy duty hand truck is perfect for shorter distances, the electric dolly will help you move loads up to 1,000 pounds across virtually any terrain, perfect for moving supplies to the work truck or even for reorganizing the warehouse.
