

A Guide to 3 Ultra Portable fluidfreeride Electric Scooters

A Guide to 3 Ultra Portable fluidfreeride Electric Scooters

Replacing your car with an electric scooter for your commute means you need something portable. Along with getting you where you need to go, you should be able to take it inside with you at the office, the store, restaurants, or anywhere. When you are looking for small and portable [electric scooters for sale](#), try fluidfreeride. Here are a few options from the brand.

fluid Cityrider

The fluid Cityrider is the entry-level mini or micro scooter to beat. The big wooden deck screams skateboard more than scooter, weighing only 31 pounds. Like other small [electric scooters](#), it folds neatly, with the stem hooking onto the rear bumper. The handlebars can be unscrewed for storage. It's a smooth ride, making it a fun scooter to ride around the city and see the sights or zip to your destination. It's also incredibly durable, as the honeycomb tires won't puncture, while the tubular steel chassis is rock-solid and makes for a quiet ride.

The Cityrider features both a rear drum brake and step-on fender brake, with a regen front brake to help conserve power. It even has turn signals. With a lower starting price and low maintenance, you are getting more than your money's worth if you treat it right.

fluid Mosquito

The fluid Mosquito might look like the kick scooters of your childhood at first, but it's a pocket rocket among [escooters](#). It weighs in at only 29 pounds, but it packs a punch, hitting 28 mph and has a top range of 22 miles. Nothing else in the ultra-portable electric scooter market

comes close. When folded down, it's simple to tuck it under a desk or in a corner, making it more or less disappear until it's needed.

It offers a rear drum brake, rear step-on brake, and front regen throttle brake. It's fast, and the brakes offer stopping power to match. It's designed for inner city environments, with dual spring suspension to cushion any blows from the road.

fluid Horizon

The Horizon is a step up from the Mosquito in terms of size, similar to the Cityrider. It's nimble enough to be called a mini electric scooter but with less of a compromise of size and speed. It's the Swiss army knife of electric scooters, good at just about everything but with a lower starting price than many competitors.

Both the handlebars and stem fold quickly, making it easy to stow. It's a bit heavier than the other options, at 42 pounds, but can hit 23 mph and has a range of 30 miles to compensate. The 8.5-inch air-filled front tire and 8-inch solid rear tire make for a smooth ride, while the rear drum brake and regen brake work well to stop the scooter.
