Causes of [erectile disorder](#) or Impotence in males

The following are the common causes of [erectile disorder](#) in men:

It is essential to understand the cause of your problem to know why you are experiencing the trouble. The following are the common causes of erectile disorder in men:

1. Endocrine diseases : The endocrine system of the body generates the hormones that help in controlling the metabolism, sensual function, reproduction, and even mood. One of the common examples of endocrine disease is Diabetes. It can have a great ability on the body to use the hormone insulin.

Even diabetes can lead to nerve damage. It can impact the male organ sensations. Other complications of this health condition can be a low flow of blood to the male organ or reduced hormonal levels. Both factors can lead to erection failure in men.

2. Neurological and nerve disorders : A lot of Neurological and nerve disorders can increase the risk of suffering from [erectile disorder](#). These nerve conditions can impact the ability of the brain to communicate with the reproductive system. This does not allow you to generate or even preserve an erection during sensual communication.

Neurological disorders associated with [erectile disorder](#) include:

1. Alzheimer's disease
2. Parkinson's disease
3. Brain or spinal tumours
4. Multiple sclerosis (MS)
5. Stroke
6. Temporal lobe epilepsy

If you earlier had prostate surgery then you can experience nerve damage and hence erection failure. Even Long-distance bicycle riders can suffer from [erectile disorder](#). This is because cycling can increase the pressure on the buttocks which can impact the nerve functioning of the genitals.

3. Taking medications : Consumption of certain medications can have an impact on the flow of blood. This can lead to [erectile disorder](#). If some medication is causing [erectile disorder](#) you need to stop the usage of that medication with the permission of your doctor.

4. Cardiac-related conditions : A lot of conditions can impact the ability of your heart to pump blood. This can cause [erectile disorder](#). When enough blood is not flowing to the male organ then you cannot acquire or maintain an erection during the sensual communication.

Atherosclerosis is also a condition that can make the blood vessels become clogged. Even High cholesterol and high blood pressure (hypertension) can increase the risk of [erectile disorder in males](#).
