Sublingual ED Medication**

Apomorphine: The Secret Ingredient in Rugiet Health's Sublingual ED Medication

How can you identify the right ED medication for you? We're all looking for a solution, but there are many different ED products on the market. How do you know which one will work for your specific situation?

Rugiet Health is the company that believes you shouldn't have to struggle through a process of trial and error. They believe you deserve better, which is why they're disrupting the pharmaceutical industry with Rugiet Ready.

Rugiet Ready is a sublingual troche that tastes great and starts working in 15 minutes or less. It's made with two ingredients that have been used to treat ED for decades: sildenafil and tadalafil. But Rugiet Health also has an ace up their sleeve called apomorphine.

Never heard of apomorphine? Here's a look at what it is and how it helps Rugiet Health deliver potent, trustworthy [ED treatment online](#).

What Is Apomorphine?

Simply put, the ingredient apomorphine is a dopamine promoter. That means apomorphine works by activating your brain's dopamine receptors and increasing activity in certain areas of the brain.

Despite its name, there's no morphine in apomorphine. In fact, it has nothing to do with opioids.

Apomorphine has other uses, but it has more recently gained recognition as an important ingredient for ED treatment. It's already commonly prescribed for ED in Europe.

How Does Apomorphine Work in Rugiet Ready?

Have you ever gotten into your car on a winter morning to drive to work? The seat is chilly, the steering wheel's freezing, and you might even have to scrape ice off your windshield. It's not exactly an enjoyable way to start your day.

Now, instead, imagine someone—and maybe you've had this experience—taking your keys while you're in the shower and starting your car for you. By the time you get out there, the heat's warm, your seat is comfortable, and the windshield has already defrosted.

Think of apomorphine as the ingredient that always has your back. When you take Rugiet Ready [sublingual ED medication](#), the apomorphine primes your brain for sexual arousal, so your body can get optimized results for the remaining active ingredients, sildenafil and tadalafil.

What Else Is There to Like About Rugiet Ready?

Apomorphine sets you up for success, while sildenafil and tadalafil help provide a balanced approach. On its own, sildenafil kicks in quickly and peaks early, lasting for four to six hours. Meanwhile, tadalafil gives you extended potency when it's the sole ingredient. Combine them, and Rugiet Ready ED medicine offers reliable results that last up to 36 hours.

But that's not the only reason Rugiet Ready is one of the top [ED meds online](#).

When you get started with Rugiet Ready, you'll use their telehealth system to connect with a board-certified doctor who will determine if Rugiet Ready is right for you. Then, they'll tailor your dose of each ingredient for optimized results.

Rugiet Ready starts working up to 5X faster and lets you go multiple rounds with a faster rebound time. Plus, since it's so versatile, you don't have to remember to take a dose every single day.

With its chocolate mint flavor and patented bitterness masking agent, Rugiet Ready doesn't just deliver optimal results. It also tastes great, so you can enjoy it from start to finish.
