

DiagNano™ Carboxyl Gold Nanoparticles, 15 nm, In-vivo

DiagNano™ Carboxyl Gold Nanoparticles, 15 nm, In-vivo (# CCGV-15) are spherical gold nanoparticles with a large amount of carboxyl groups outside. These gold nanoparticles can be used especially in-vivo since they are coated in a proprietary dense layer of hydrophilic polymers that shield the gold surface and give the particles ultra-long circulation times. 50 OD nanoparticles are supplied in DI water or other buffers.
