

CAREER OPPORTUNITIES WITH MASTERS OF BUSINESS ADMINISTRATION IN SOUTH AFRICA

It is frequently noted that occupations in sales, marketing, management, customer relations, or consulting are among the best-positioned in the labour market. This is due to the fact that business trends change all the time. The demand for brilliant, innovative minds is great, and MBA graduates from Henry Business School are demonstrating their ability to meet that demand.

In this article, we'll look at what **Masters of Business Administration** offers and what you can do with it.

1. Chief Technology Officer

A Chief IT Officer, or CTO, is the person in charge of a company's technological aspects, responding on a regular basis to any demands that may arise while dealing with IT-related issues and ensuring that the organization complies with IT policy.

The CTO's primary areas of expertise include developing and implementing a good technology strategy that aligns with an organization's scope of work, researching and developing technology standards and compliance regulations, and effectively communicating the company's technology strategy to relevant partners, management, investors, and coworkers. As a CTO, you normally report to the CEO.

2. Investment Funds Manager

Investment bankers, like intermediaries, provide advisory services. Investment fund managers do the same. These persons typically deal with individual and corporate clients rather than governmental bodies, and they are compensated for their services.

Investment fund managers provide financial advice on investment activities involving bonds, equities, and securities inside an existing fund. In general, they assist their clients in making the best investment decisions while mitigating any potential risks. You can apply for an **MBA degree in South Africa**.

3. Senior Project Manager

People frequently mix the terms "project manager" with "senior product manager." Their tasks include leading the work of product managers and correctly managing the teams involved in engineering, marketing, and other important areas. They are in charge of assessing customer feedback on the product, updating its strategy, and developing new, creative ways to introduce the product to new audiences and target groups.

This role carries a great deal of responsibility because the person in charge can either improve or diminish the product's success. Henley Business School offers **Masters of Business Administration** programs, allowing one to pursue their dream of being a qualified senior project manager.

4. Tech

Although consulting and finance have traditionally been regarded as the two most popular fields for MBA graduates, technology has recently grown in prominence, forming a new 'Big Three' of MBA industries. Approximately 45% of millennial business school students want to work in technology following graduation.

MBAs are frequently hired as managers or leaders in large technology companies. This extends all the way to the top, with Google CEO Sundar Pichai, Amazon CEO Andy Jassy, Microsoft CEO Satya Nadella, Apple CEO Tim Cook, and Facebook COO Sheryl Sandberg all holding MBAs.

To Sum It Up

This was our ranking of the top jobs available with a **Masters of Business Administration** degree. However, if your skills do not appear on this list, or if you have no interest in either, we recommend that you focus your search on alternative jobs that may benefit from an MBA degree. There are lots, and they're waiting! So, apply for an MBA degree at Henley Business School.
