

Get Ready for Fun in the Sun with Outdoor Research

Get Ready for Fun in the Sun with Outdoor Research

Biking, hiking, running, paddle boarding—the list of your favorite outdoor activities goes on. Summer is the season of fun in the sun. You're out there having a blast, experiencing the thrills, and enjoying epic views. But do you have adequate sun protection?

You may have applied sunscreen before heading out the door, but what if you could take your sun protection strategy to the next level? What if you could go from *adequate* sun protection to *superior* sun protection?

Outdoor Research makes sun protection simple—throw on a lightweight pair of shorts, wear them with a breezy sun shirt, and you're ready for anything. Outdoor Research is known for high-quality products designed to protect you from the elements, from [rain jackets](#) to sun shirts. How can their gear help you stay protected this summer?

Bring Shade Wherever Your Adventures Take You with a Sun Hat

Hats can be a great way to keep the sun out of your eyes and off your ears and the back of your neck. Have you ever forgotten to apply sunscreen to your ears? It happens to even the most prepared outdoor enthusiast, and it's not fun.

With a full-brimmed hat from Outdoor Research, you can protect your ears and much more. The Helios Sun Hat is lightweight, full-brimmed, and ready for adventure. If you're looking for a sun hat with more casual vibes, the Papyrus Brim Sun Hat might match your style.

For the runners out there, the Sun Runner Hat keeps things light while keeping your eyes, face, ears, and neck protected. The Sun Runner offers extra versatility, too, with a two-part design. Wear it as a standard lightweight cap, or attach the removable cape for added protection.

Stay Cool and Protected on Every Adventure with a Sun Shirt

Sun shirts can be an incredibly simple way to protect yourself from the sun's rays. Outdoor Research has a versatile lineup of mens and womens sun shirts, from sun tees to hoodies to button-ups. That makes it easy to find the ideal [sun shirt](#) for every adventure!

The Activelce Spectrum Sun T-Shirt is one sun shirt that offers serious versatility. It's made with lightweight, breathable materials and UPF 50+ protection. It's also moisture-wicking and supports on-the-go cooling thanks to Activelce cooling technology.

Another great feature of the Outdoor Research sun shirt collection is their ability to be strategically layered. You can easily wear sun shirts with lightweight jackets for cooler, earlier morning adventures when you know you'll warm up quickly on the trail. You can also find lightweight, durable womens and [mens rain jackets](#) to wear over your sun shirt in case the weather takes a turn. No matter what the forecast says, it's always best to be prepared for anything.

Sun Pants and Shorts Keep the Adventure Going Mile After Mile

Hat and shirt: Check. All that's left is choosing your bottoms. Outdoor Research has several options to keep your legs well-protected mile after mile. If you're looking for full coverage, waist to ankle, the Outdoor Research Ferrosi Joggers offer a lightweight design and UPF 50+ protection.

If the temperatures are high, you might prefer shorts that still offer effective sun protection. The Ferrosi Shorts fit the bill. Like the Ferrosi Joggers, these shorts also offer UPF 50+ protection, along with stretch and breathability to move with you. If you choose shorts, be sure to apply some sun protection on your exposed legs for a safe and enjoyable time outdoors.
