

How Apomorphine Sets Rugiet Ready Apart From the Competition

How Apomorphine Sets Rugiet Ready Apart From the Competition

There are many different types of ED treatment available online these days, but there's only one custom-tailored [ED medication](#) that works in 15 minutes or less: Rugiet Ready.

Rugiet Health, the company behind Rugiet Ready, is disrupting the pharmaceutical industry because they believe you deserve better. With Rugiet Ready, there's no more planning ahead, no more one-size-fits-all treatments, and no more long waits.

That's exactly why Rugiet Health has sold over 2.7 million doses.

To achieve optimal results, Rugiet Ready includes apomorphine as a key ingredient. How exactly does apomorphine set Rugiet Ready apart from other ED treatment options? Read on to learn more.

What Is Rugiet Ready Sublingual ED Medication?

Unlike traditional pills for ED, Rugiet Ready is a sublingual troche that dissolves beneath the tongue for optimal absorption of the medication.

With its chocolate mint flavor and patented bitterness masking agent, Rugiet Ready isn't just potent—it also tastes great, so you can enjoy it from start to finish.

In addition, Rugiet Ready is different because it's available in four strength combinations. When you get started with Rugiet Health, you'll use their secure, advanced telehealth system to connect with a board-certified doctor who will set you up with your ideal dose for optimized results.

Why Does Rugiet Ready Use Apomorphine?

Rugiet Ready [ED medicine](#) combines three potent ingredients to deliver superior results: sildenafil, tadalafil, and apomorphine. The first two have long been used for ED treatment, but apomorphine is a relative newcomer.

What does apomorphine do, exactly? It's a dopamine promoter, which means it primes the brain for sexual arousal.

Think of apomorphine as the sidekick that helps you get more out of the sildenafil and tadalafil in Rugiet Ready. As Rugiet Ready dissolves and starts working, apomorphine sets the stage so sildenafil and tadalafil can shine.

How Does Rugiet Ready Provide Better ED Treatment?

Once the apomorphine has primed your brain for arousal, sildenafil starts things off by kicking in quickly and peaking early. Meanwhile, tadalafil balances it out with extended results.

By combining these three ingredients, Rugiet Ready starts working in 15 minutes or less and lasts up to 36 hours. Plus, Rugiet Ready allows you to go multiple rounds with a faster rebound time.

Because Rugiet Ready is a [sublingual ED medication](#) that absorbs under your tongue, it hits the bloodstream right away, bypassing your digestive system. That means you don't have to worry about planning ahead or delays because of your latest meal. With Rugiet Ready, you can enjoy a hearty meal and still experience optimal results.

And here's the cherry on top: Even after you start taking Rugiet Ready, you can reconnect with your board-certified doctor to further refine your dose. The days of one-size-fits-all ED treatment are finally over. Instead, you can all enjoy your ideal, individualized ED medication, thanks to Rugiet Ready.
