

Brain atrophy is a neurological disorder whose occurrence affects the normal life and work of human beings. Our company has advanced technology and proven testing methods in disease model evaluation, and we focus on providing our clients with a variety of scientifically designed and validated methods for testing animal behavior and solutions for brain injury research.

#### Introduction of Brain Atrophy

Brain atrophy is usually caused by aging, brain injury, neurological disease or infectious disease, and is a disease of the central nervous system due to organic lesions of brain tissue. Pathologically, it shows a reduction in the volume of brain tissue, a decrease in the number of cells, and an enlargement of the ventricles and subarachnoid space.
