

New Year, New Magliner: 4 Magliner Tools to Upgrade Your Efficiency

New Year, New Magliner: 4 Magliner Tools to Upgrade Your Efficiency

The new year is in full swing, and you may be reevaluating which tools your business needs. Do you need to upgrade your material handling equipment to make your employees faster, more efficient, and safer? Magliner material handling tools can help. Whether it's using a customized hand truck in place of an old dolly or upgrading to a [motorized hand truck](#), these Magliner tools can make a significant difference.

Customized Hand Trucks

You can Design Your Own Magliner to suit your needs perfectly. Customizing a Magliner [hand cart](#) can make more of a difference than you might think. Upgraded tires can keep floors safe while still cushioning the items your employees move. You can customize the handles to be ergonomic for your employees' uses as well. There are millions of ways to customize Magliner hand trucks, so they are perfect for your business.

Heavy Duty Hand Truck

Are your employees still performing team lifts for larger, heavier items like couches and appliances? It's time to give them a Magliner heavy duty hand truck with a weight capacity of 800 pounds. With a higher weight capacity than the classic hand truck, it's perfect for moving bulky, heavy items like fridges and couches. The best part is that a single employee can use the heavy duty hand truck, freeing up another employee for other tasks. The Magliner appliance hand truck offers options including side wings, a self-retracting ratchet strap, and a fourth wheel assembly.

Convertible Hand Truck

The Magliner convertible hand truck is another upgrade to consider. It offers all the utility of the legendary classic Magliner upright hand truck but can quickly transform into a horizontal hand truck in four-wheel mode with a higher weight capacity of 1,000 pounds. This is ideal if you need to move oddly shaped items or need to stack more boxes and have a relatively level path to the destination. It's great for restocking vending machines or delivering assorted boxes and parcels. When you are done, it just takes a few seconds to convert it back to the upright hand truck for easy storage.

Powered Hand Truck

Moving heavy items from a warehouse to a delivery truck can be challenging. The heavy duty hand truck excels at shorter distances but can be tiring for longer distances. Enter the Magliner [powered hand truck](#). It can do most of the work for your employees and tackles the job of moving large, heavy items longer distances with ease. Quick-change attachments give it versatility, including an attachment for helping erect event tents and another for towing small trailers. If your team regularly moves items weighing up to 1,000 pounds, you need a Magliner motorized hand truck.

Make this your team's most efficient year yet with premium Magliner tools, available at <https://www.magliner.com/>
