You might be facing an unrecoverable error in QuickBooks desktop due to the following reasons. Have a look and continue to reach the roots of the problem:

- In case your computer system is corrupted or has internal technical glitches, QuickBooks unrecoverable errors may arrive.
- Any glitch with your QuickBooks data integrity with company data files is also **responsible** for facing unrecoverable errors.
- QuickBooks unrecoverable errors can be a result of poor or unstable network connection.
- One of the common and **genuine** reasons for facing the QuickBooks unrecoverable error is power outages.
- The outdated Windows or QuickBooks desktop version also contributes to the **invitation** of unrecoverable QuickBooks errors.

Learn More About How to Fix Unrecoverable Error in QuickBooks Desktop

Now, that you know about the causes that trigger the Unrecoverable Error in QuickBooks Desktop, it's the high time to rectify the issue. So, to eliminate the issue, you must go through all the resolution methods illustrated below.

General Resolution Methods To Rectify Unrecoverable Error in QuickBooks

Resolution Way 1: Launch the QuickBooks Application

You can try opening the QuickBooks application on your device, ensuring all windows have shut down properly. Go through the following procedure to launch the data file with all windows closed.

1. Start the process by opening the **QuickBooks Desktop** and then launching the data file on your device.
2. After this, press the **Alt key** to click the **Open option**. Herein, ensure you don't leave the **Alt key** until you see the file is open on your screen. For instance, if QuickBooks prompts you to log in, you must leave the **Alt key** and include the password accurately.
3. Thereon, press and keep holding the **Alt key** again and hit the **OK button**.

Resolution Way 2: Create a New Administrator for Windows

Still, the error is occurring. Let's create a new administrator for Windows and try to troubleshoot this stubborn unrecoverable QuickBooks error. The steps are different for different Windows Operating Systems; let's start:

For Windows 10:

1. To begin with this, you need first to hit the **Start button** and tap the **Settings** option. From the **Settings** menu, you are required to select the **Accounts** option and continue to click the Family & its other users.
2. Now, under the other user's option, you have to add any other user to the computer. You need to select the **option** with text, as I don't have this person's sign-in information.
3. In this step, click the add user option without using your Microsoft account. Now, **enter a new name to create a new administrator account for Windows**, followed by clicking the **Finished** button.
4. Finally, choose the **administrator** option and hit the **OK** tab to finish the procedure successfully.

For Windows 7, 8, 8.1, and Vista

- Firstly, you need to press the **Windows + R** keys simultaneously, and you get a window for Run the Window Program.
- In the second step, type **Control Panel** and after getting the results hit the **Enter button**. Now, click the user accounts and **continue** to hit the manage another **account** option.
- Along with this, click the make a new **account** option and enter the name for a new account. Select the **administrator** option and create a new Windows account.

For Windows Server

- Open your database server manager, select the **Tools** option, and select the **computer management alternative**.
- Select the **group's** option and double-click the **administrator group** by opening the **administrator properties window**.
- Choose the **Add** option and move to click the items Users, Service accounts, computer systems, and Groups Window.
- Finally, enter the **account name** to create a new Microsoft account as administrator by hitting the **OK** tab.

Resolution Way 3: Open a Sample Company File and Recheck the Unrecoverable Error

Maybe the root cause is lying in the company file only due to damage and corruption. That's why it's recommended to copy the company file to a new location and access it from the same location.

To open a sample company file:

- You need to be on the **No Company Open window** and click the **Open a sample file option**.
- After this, you will find a list of many files here; click any one out of these sample files.

To move the copy of a company file to a new location:

- You need to first create a fresh file folder on your QuickBooks desktop named **QBTEST**.
- In the **next step**, you are required to open the folder in which your company data file is saved. **Copy this file from the folder and move to the next step**.
- Now paste the copied file into the **newly created QBTEST** folder. After this, reattempt to access your company file from the new location.

Resolution Way 4: Shift Your Data File to a Distinct Folder

There is a possibility that your data file folder is damaged, which ends up with an unrecoverable error in QuickBooks. So, in that case, you must copy your data file to a newly generated folder to see whether the folder you are accessing is damaged.

1. You must right-click anywhere on your Desktop and click the **New option** followed by the **folder** option.

2. After that, you must assign a new name to the folder as QBTEST and proceed further.
3. Thereon, launch the folder where you have placed your data file.
4. Now, the users must right-click on the file and go with the Copy option.
5. You are supposed to copy the data file in the newly generated folder i.e., "QBTEST".
6. End the process by launching the file from the new folder, and if the error doesn't appear it will represent that your data file is damaged. In certain scenarios, you have to generate a new folder to hold your data file.

Resolution Way 5: Try To Fix the Issue Using a Different QuickBooks User

1. To begin the process, navigate to the Company option > Set Up Users and Passwords > Set Up Users.
2. On the other side, if you are an Enterprise User, then browse to the Company menu > Users > Set Up Users and Roles.
3. Afterwards, pick the Add User option and include the username and password in the respective text fields.
4. You must modify the users according to your preference and hit the Finish button.
5. Soon after this, reach the File menu > Close Company/Logoff and then login to your data file using the right login details.
6. Finally, if you notice that the new user works then you have to remove the old one creating the issue and generate them again.

Resolution Way 6: Utilize the Quick Fix My Program To Repair the QB Program

1. To use the Quick Fix My Program, you first have to get the updated QuickBooks Tool Hub.
2. Once you download it, install them performing the steps as given on the screen to complete the installation of Tool Hub.
3. After this, launch the QuickBooks Tool Hub and hit the Program Problems tab.
4. Thereon, choose the highlighted Quick Fix My Program and launch the QuickBooks Desktop also the data file.

Scenario 1: QuickBooks Unrecoverable Error When Opening Company File On Workstation

Most often, users might encounter the QuickBooks Unrecoverable error when opening company file on the workstation. This issue mainly arises when the QBCFMonitorService is running on the workstation that isn't hosting the data file. Therefore, to regain access to the data file, you must carry on with the troubleshooting methods listed below.

Resolution Way 1: Fix the Damage In QuickBooks Desktop For Windows

To repair the damage in the QuickBooks company file you can either use Quick Fix My Program or the QuickBooks Install Diagnostic Tool. Follow the steps listed below to run the install diagnostic tool.

1. Before proceeding further, ensure you have installed the updated QuickBooks Tool Hub.
2. From the QuickBooks Tool Hub, navigate to the Installation Issues tab and click the QuickBooks Install Diagnostic tool.
3. After this, you have to wait till the time tool is running on your device.
4. Once you are done with fixing the issues via the QB Install Diagnostic tool, open the QBDT application and your data file.
5. Try to get the latest version of the QBDT and ensure that the issue is resolved.

Resolution Way 2: Stop Using QBCFMonitorService from relaunching on the workstation

1. To start the process, launch the Run Command window on your device.
2. Afterwards, include "services.msc" into the search column and hit OK to proceed further.
3. In the next step, scroll down to the bottom of the list and tap the QBCFMonitorService twice to pick the Properties option.
4. Thereon, you must ensure you have marked Disabled as the Startup Type.
5. End the process by hitting the Apply followed by the OK button.

Scenario 2: Unrecoverable Error when performing a bank reconciliation or viewing previous reconciliation reports

Follow the solutions given below to rectify the Unrecoverable Error while doing the bank reconciliation or viewing older reports.

Resolution Way 1: Modify the Display PDF in Browser Preference

1. Start the process by accessing the Programs/All Programs option after clicking the Windows menu.
2. Consequently, it will present you with the list of all the applications installed, and from there, go with the Adobe Reader/Acrobat option.
3. Afterwards, choose Edit > Preferences >, and from the Categories List, go with the Internet option.
4. Thereon, tap to remove the Display PDF in Browser Preference from the Web Browser Options section.
5. Finally, hit the OK button after making all the mandatory changes.

Resolution Way 2: Get the Updated Version of the Adobe Reader

1. To install the updated Adobe Reader, open the Adobe Reader and move to the Help menu.
2. Afterwards, opt for About Adobe Reader, and there, if you notice the versions i.e, 8.0, 9.0, or 10.0 It signifies that you need to upgrade to version 11.0. You have to get Adobe Reader 11.0 from Adobe's official website.
3. Thereon, you must follow the instructions on the screen to install Adobe Reader 11.0.
4. Later on, relaunch your computer once you are done updating Adobe Reader.
5. Finally, relaunch your device and then try to review your older bank reconciliation report.

Scenario 3: Unrecoverable Error when you select a transaction for reconciliation

The users can proceed further with any of the following solutions when they end up with the Unrecoverable error in QuickBooks due to a damaged Primary Name List or Chart of Accounts.

Resolution Way 1: Repair Your Data File in QuickBooks

To repair the damaged data file, you must follow the process below.

1. [You can run the Rebuild Data Tool to fix the damage in the company file.](#)
2. [Also, you can use the QuickBooks File Doctor Tool.](#)
3. [Fix the damage in your data file by rebuilding your data.](#)

Resolution Way 2: Try to Restore Your Data File Using a Recent Backup or Through Auto Data Recovery

Follow the Steps to Restore the Data File

1. In the initial stage, navigate to the QuickBooks file menu > Open or Restore Company > Restore a backup copy > Next.
2. Afterwards, choose the highlighted Local Backup > Next and go to the place where you have stored the data file. Later on, hit the Open button.
3. Once you made the necessary changes, tap the Save button to complete the process.

You can also use the [Auto Data Recovery tool](#) to restore the lost data.

Scenario 4: Unrecoverable Error when importing Accountant's Changes

The users might confront any of the following errors when they get the Unrecoverable error while importing Accountant's changes.

- Unrecoverable Error 00000 16133
- Unrecoverable Error 00000 41953
- Unrecoverable Error 00000 42294
- Unrecoverable Error 00000 43109
- Unrecoverable Error 00000 16440
- Unrecoverable Error 00000 42045
- Unrecoverable Error 00000 40592
- Unrecoverable Error 00000 41897
- Unrecoverable Error 00000 42127
- Unrecoverable Error 00000 31901
- Unrecoverable Error 00000 41765
- Unrecoverable Error 00000 95431
- Unrecoverable Error 00000 37760
- Unrecoverable Error 00000 31609

Follow the Solutions below to rectify the error generated while importing Accountant's Changes

Resolution Way 1: Carry On With the Import Process

1. To begin the process, hit the **Send** button whenever you see the error message on the screen.
2. Afterwards, tap the **OK** button to **continue** importing.
3. As a result, you will obtain the list displaying the changes that is not imposed on the client's file. So, for that, it is important for the users to include those changes manually.

Resolution Way 2: Review the Data and Re-Establish Change File

1. You have to restore the recent backup using the steps explained above. Otherwise, you can also prepare the backup while importing the accountant's changes.
2. Thereon, run the **Verify** and **data utility** on the client file.
3. Try to get the most recently launched QuickBooks Desktop edition on your device.
4. Finally, you must re-establish the change file within the Accountant's copy in QuickBooks Desktop.

Scenario 5: Unrecoverable error when writing checks with QuickBooks Online Bill Pay:

You can't use the QuickBooks Online Bill Pay feature anymore as it is discontinued from 12/2/19. For instance, if you are still operating this service and confronting the QuickBooks Unrecoverable error while writing the checks. In that scenario, ensure that you have disconnected the QuickBooks Online Bill Pay feature before using it.

Drawing To a Conclusion!!
