

Which Daniel Defense® Rifle Is Right for You?

Which Daniel Defense® Rifle Is Right for You?

Choosing the right rifle can be tricky. What caliber do you need? What length? Are you hunting with a bolt-action or going to a competition with an AR-style platform? With Daniel Defense®, you can find the [308 AR](#) of your dreams or assemble your own custom rifle from a wide range of parts, helping you create the rifle that suits your needs.

MK12

With an 18-inch steel barrel, the [MK12 rifle](#) is the evolution of the special-purpose rifle. The chamber and bore are as precisely aligned as possible, and a free-floating Picatinny quad rail and DLC finish help provide unprecedented accuracy and durability. The precision rifle is finished off with an ambidextrous charging handle, flash suppressor, and Geissele SSA 2-Stage Trigger to give you an advantage when it comes to precision shooting.

M4A1

Daniel Defense® offers a few different versions of the classic M4A1 rifle. The RIII, for example, offers a 12.5-inch RIS III rail, which offers a Picatinny top and M-LOK on the other sides to help lower the weight compared to the original M4A1's quad Picatinny rail. The lower offers fully ambi controls, and the charging handle is ambidextrous, as well. The 14.5-inch barrel includes a Daniel Defense® Flash Suppressor.

DD5 V4

Do you need something chambered in a larger caliber? Try the DD5 V5. It's a hard-hitting, fast-handling rifle, ideal for North American big-game animals. It offers the reliability and accuracy you need on your next hunt, with all of the long-range precision Daniel Defense® is known for.

Delta 5 Pro

If precision is the name of your game, you want a bolt-action Delta 5 Pro. With a world-class hammer forged barrel and custom enhancements, this rifle comes with a .5 SUB-MOA Guarantee. Daniel Defense® guarantees you can hit 0.5 MOA or less at 100 yards if you use factory match-grade ammunition. The interchangeable barrel makes it easy to replace barrels or change calibers, all thanks to a proprietary barrel nut.

Build Your Own Daniel Defense® Rifle

Another option is to assemble your own rifle using Daniel Defense® parts. You can start with the [AR15 upper receiver](#) of your choice, add it to a lower, change out the grip, choose a stock, decide on a muzzle device, figure out which barrel length and handguard you want, and make the rifle perfect for you and your needs. While you will have to put it together yourself, it offers the highest amount of customization, and Daniel Defense® can help you get all the parts you need for a high-quality custom rifle.
