

## What are the Various Split AC Problems and How to Fix Them?

Air Conditioner is one of the most common and needed commodities of the modern times. Just imagine city life without air conditioners to welcome you when you have just had a long traffic jam on a bike. Or what about being stuck in traffic without the AC in your car? We all know that the climate in India is not only hot but also quite humid. This makes air conditioners a mandate for tropical countries like ours. You can see the air conditioners being installed in each and every house, office, or building. [Professional AC installation services in Bhubaneswar](#) are also in demand due to the increase in the number of AC requirements.

There are various types of air conditioners that can be installed and each type is specified to meet certain expectations. Majorly speaking, there are 3 kinds of air conditioners such as split ACs, window ACs, and cassette ACs. Split and window ACs are normally installed and used in homes and smaller offices because they cover a smaller area and cassette ACs are installed and used in large offices and corporate buildings because they cover a larger area in cooling.

As a machine, just like any other machine, your AC might just have many problems. Normally an AC comes with a warranty on them for a time period of 1 to 5 years or may be more or less than that. The warranty period includes all kinds of repair and installation for your AC. But after the guarantee period is over and the machine shows any kind of problem then you hire professional [AC repair services in Bhubaneswar](#). As split ACs are the most common kind of ACs let's look into some of the common problems that you face for your split AC.

1. **Compressor switching off regularly** – This becomes a problem for most people who live in cities and pollution is rampant. When dust and dirt accumulate and choke the AC filter, the AC starts to work harder for air intake and this results in increasing pressure on the compressor. You can try to open the AC from time to time and clean the dust accumulation but it would be better to call on professional split AC repair services in Bhubaneswar and let them take care of it.
2. **Leakage of refrigerant** – This is the most common problem that people face. As the refrigerant is always under stress and stored in high-pressure areas, the copper pipes may get weak and develop holes due to corrosion and humidity. The best possible way to fix these leakages is to call the experts in AC gas filling in Bhubaneswar.
3. **Swinging mechanism not functioning** – This problem is caused because of two possible reasons, either the swingers are controlled by separate motors or the motors are not getting the current. In either case, it is better to get it checked as soon as possible.

If these problems are something that you can relate to then just give a call on 07795001555 or visit [www.techsquadteam.com](http://www.techsquadteam.com) and book our services. Once the booking is done our technicians reach your place at your scheduled time.
